DAY 1 (June 12, 2023)

REGTECH IMPACT FORUM

Implementing regulatory requirements intelligently

RegTech, or Regular Technology, is a growing area of interest for businesses and organizations that need to comply with complex governance, risk, and compliance issues. Which RegTech solutions are most appropriate depends on the nature of the business of the business and its target markets. At the RegTech Impact Forum we will explore how the latest technologies can help simplify and make compliance more efficient.

We bring together leading RegTech experts to understand the current use cases in different industries and highlight the impact RegTech has on organizations. Hear how RegTech is changing the way businesses operate and learn from those at the forefront of this transformation.

The **RegTech Impact Forum** provides a valuable opportunity to share knowledge, experiences, and insights on RegTech and how it can sustainably reduce costs while improving governance, minimizing risk, and adhering to compliance regulations—laying the ground for Day 2 with a deep dive into the anti-money laundering (AML)/counter financial terrorism (CFT) world and the challenges faced with regards to curbing global financial crime.

DAY 2 (June 13, 2023)

GLOBAL AML/CFT CONFERENCE

How to counter money laundering and terrorist financing

Money laundering and terrorist financing continue to be big threats to the global economy and its security. They are still a high priority in the international financial and economic policy. The EU Action Plan as well as the establishment of the new EU AML Authority (AMLA) for a comprehensive EU policy and information sharing on preventing money laundering and terrorist financing are the efforts to combat these threats.

But what are the challenges which the world of finance and business face? What channels do the money launderers use and what are their tactics? And how can it be tracked and prevented? How can banks, institutes, and companies comply with the increasing AML regulations and how can technology and digitalization be helpful for them?

The implementation of regulatory requirements for market participants or obligated parties in anti-financial crime as well as the associated increasing handling of mass data—e.g., KYC obligations, transaction data, customer data—represent a task that cannot be mastered in the future without the use of innovative RegTech solutions. Also, on the authority side the requirements and necessities for the use of RegTech solutions to be able to set the right priorities efficiently and effectively are increasing, e.g., with the support of AI and machine learning.

At the **Global AML/CFT Forum**, high-ranked officials and renowned experts not only discuss these questions but provide practical knowledge.
